Everything I sketch on the iPad Pro comes out clear and intact on my Mac, but I don't have to give Photoshop Sketch any special attention. I can do more than I could on my previous Mac with the iPad Pro. I sketch the design in my notebook or on paper, then I make any needed corrections on the iPad. I then export the files directly to Photoshop, where I can color balance, change any necessary sliders, and have my illustrator. To create images intended for the iPad Pro, I use Adobe Photoshop Sketch. It's a fantastic piece of software. It's robust, intuitive, and I can't begin to say how much I love its feel compared to other drawing tools. With it, I've sketched two projects for the iPad Pro that were made for the iPad itself-- a script, as I demonstrate on the following page, and a book design, which you can view online. The mark of a professional is the ability to learn new ways of working and apply them to new projects without being "lost" in the programming and figuring out constantly. Adobe's drawing tools are perfect for creative professionals on the go, and for creating a printed document for the iPad Pro. Sometimes the beauty of software beauty just blows me away. In a perfect world, all of these issues would be taken care of with a click of a button, and I would be enjoying my work. But it doesn't work that way, and since I'm not in a perfect world right now, I have to resort to all sorts of wacky tricks.
